Score | Energy rating

Total floor area	43 square metres	

Mid-floor flat

Properties can be rented if they have an energy rating from A to E.

Rules on letting this property

If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read guidance for landlords on the regulations and

exemptions.

This property's current energy rating is D. It has the potential to be C. See how to improve this property's energy performance.

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

The average energy rating and score for a property in England and Wales are

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The

assessment does not consider the condition of a feature and how well it is working. Each feature is assessed as one of the following:

• very good (most efficient) • good

poor • very poor (least efficient)

- When the description says 'assumed', it means that the feature could not be

D (60).

inspected and an assumption has been made based on the property's age and type.

average

Description Feature

Wall Solid brick, as built, no insulation Very poor (assumed) Partial secondary glazing Window Poor

Main heating	Boiler and radiators, mains gas	Good	
Main heating control	Programmer, TRVs and bypass	Average	
Hot water	From main system	Good	
Lighting	Low energy lighting in all fixed outlets	Very good	
Roof	(another dwelling above)	N/A	
Floor	(other premises below)	N/A	
Secondary heating	None	N/A	
Primary energy use			
The primary energy use for this property per year is 258 kilowatt hours per square metre (kWh/m2).			

Environmental impact of this property

produces

► What is primary energy use?

One of the biggest contributors to climate change is carbon dioxide (CO2). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

1.3 tonnes of CO2 This property's potential production

By making the recommended changes, you could reduce this property's CO2 emissions by 0.7 tonnes per year. This will help to protect the environment. Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

How to improve this property's energy

(67) to C (75). What is an energy rating?

Recommendation 1: Internal or external wall insulation

Internal or external wall insulation Typical installation cost

Making any of the recommended changes will improve

If you make all of the recommended changes, this will

improve the property's energy rating and score from D

Recommendation 2: Heating controls (room thermostat) Heating controls (room thermostat) £350 - £450 Typical installation cost £16 Typical yearly saving Potential rating after carrying out 74 | C recommendations 1 and 2

Replace single glazed windows with low-E double glazed windows Typical installation cost £3,300 - £6,500

Recommendation 3: Double glazed windows

Find energy grants and ways to save energy in your home.

Typical yearly saving £18 Potential rating after carrying out 75 | C recommendations 1 to 3 Paying for energy improvements

Estimated energy use and potential

The estimated cost shows how much the average household would spend in

The estimated saving is based on making all of the recommendations in how

1733 kWh per year

If you are unhappy about your property's energy assessment or certificate,

If you are still unhappy after contacting the assessor, you should contact the

You might be able to receive Renewable Heat Incentive payments. This will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments. Contacting the assessor and accreditation scheme
